MIENTRAS USTED DIRIGE SU NEGOCIO  
NOSOTROS ADMINISTRAMOS SU  
INFORMACIÓN PARA AYUDARLO A  
TOMAR LAS MEJORES DECISIONES

## QUE ES UN BPM

Se llama Gestión de Procesos de Negocio (Business Process Management o BPM en inglés) a la metodología empresarial cuyo objetivo es mejorar la eficiencia a través de la gestión sistemática de los procesos de negocio, que se deben modelar, automatizar, y optimizar de forma continua

Nuestros equipos de consultoría se concentran al 100% en ayudar a nuestros clientes a aprovechar las oportunidades detectadas para lograr objetivos estratégicos.

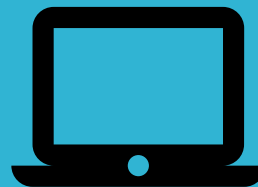

## CREANDO SOLUCIONES ADECUADAS A LAS NECESIDADES DE NUESTROS DÍAS

Because the software matters

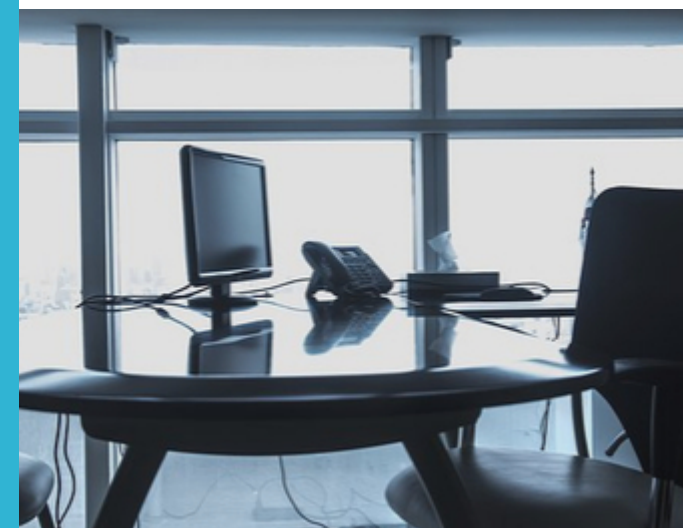

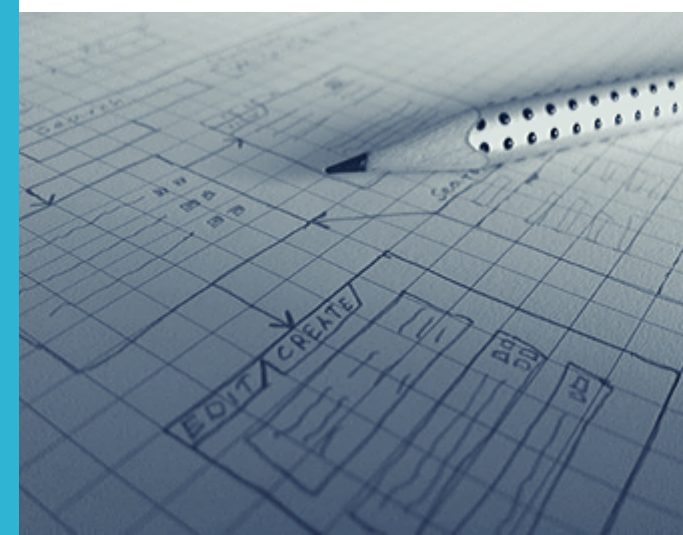

### Sin costos ocultos

Nos aseguramos que pague lo que es justo.

### Proveemos las mejores soluciones

Aprovechamos todo el potencial adquirido con nuestros clientes para dar soluciones eficientes.

## Agility

Organizations are constantly faced with the need for change. Changes may become necessary as a result of new regulations, market demands or the emergence of new ways of working.

One key feature of BPM is that it facilitates the design of processes that are flexible. With BPM, you get the flexibility of making changes to processes with minimal costs. Processes can easily be customized to suit the requirements of your organization.

## Productivity

BPM can facilitate the automation of a lot of repetitive elements within regular workflows. Process improvements like removal of bottlenecks, introduction of parallel processing, and elimination of redundant steps can easily be achieved with BPM. This improvement will allow employees to spend more time on other activities since the main support functions would have been handled. This translates into increased productivity and reduced waste.

## Efficiency & Reduced Risks

The visibility of business processes allows for concentration on inefficiencies. Because BPM gives organizations the opportunity to work more efficiently, they are able to save their resources. BPM also results in the creation of better-designed, executed and monitored processes which can help reduce the risk of fraud.

## Compliance & Transparency

Organizations need to be compliant with industry regulations. BPM ensures that organizations can implement regulatory requirements quickly, thereby preventing delays in compliance and any associated fines. When you adopt BPM, you integrate compliance into the process life cycle. This also implies that organizational processes will become transparent and visible to employees.

## Employee Satisfaction

BPM eliminates a lot of red tape in organizations and allows employees to focus 100% on their work since process automation cuts down on a lot of repetitive work and makes information access easier. This in turn makes for increased productivity and a happier workforce.

## Customer Focus

BPM eliminates a lot of red tape in organizations and allows employees to focus 100% on their work since process automation cuts down on a lot of repetitive work and makes information access easier.

This in turn makes for increased productivity and a happier workforce.

## Sustainability

Business Processes are continually improved to adapt to changing organizational conditions so that they can deliver the expected results. This adaptation can be achieved with BPM while maintaining control or managerial oversight.

## Consistency, Repeatability & Transferability

With BPMS, each task is executed the way it was planned and designed. Identical problems are addressed the same way and there is no need to reinvent the wheel, even if roles do change. Exceptional situations and responses can also be clearly defined with BPM to ensure they are handled appropriately.

## Measurability

All processes can be measured end-to-end and compared to expected results. This helps to manage people and processes. BPM when implemented with technology, provides reporting and analytical tools for making executive decisions. With BPM, you can streamline processes and quantify how these processes are helping your organization optimize its workflows.

## Technology Integration

BPMS bridges the communication gap between business users and IT, thanks to the use of standards like BPMN. With BPM, the focus is not on “applications” but on “processes”, along with the applications that support them. This article has highlighted some of the benefits that business process management can bring to an organization. BPM is not a software application or a group within an organization, it is a way of working within the organization that ensures it can derive these benefits.
